EDUCATION

Boston University

Expected May 2026

Bachelor's Degree in Computer Science

Boston, MA

- **GPA:** 3.65, **Dean's List:** Spring '24, Fall '24
- **Relevant Coursework:** Data Structures & Algorithms, Software Engineering, Database Management Systems, Distributed Systems, Analysis of Algorithms, Full-Stack Application Development, Artificial Intelligence

EXPERIENCE

Otodata

May 2025 - August 2025

Software Engineer Intern

Montréal, QC

- Developed an FTP reporting feature in the Neevo portal using C# and AngularJS, enabling clients to generate branch-level tank monitor reports
- Resolved 15 defects in UI rendering, translations, object-relationship logic, and API endpoints, reducing recurring support tickets and improving platform stability
- Optimized CI/CD unit test pipeline by identifying and removing redundant mock database initialization, reducing test suite run time from ~60s to under 5s

Human-to-Everything (H2X) Lab

October 2024 - May 2025

Software Development Research Assistant

Boston, MA

- Created 40 CARLA simulation maps by converting real-world nuScenes driving routes from Singapore into detailed road networks using OpenStreetMap and RoadRunner
- Integrated completed maps into the CARLA simulator, validating scene accuracy and preparing simulation viewpoints for autonomous driving research use

BU Spark!

September 2024 - December 2024

Software Engineer Fellow

Boston, MA

- Earned the Innovation Award for AccessiScan project, selected by judges at BU's Experiential Learning Expo
- Coordinated research with 20 professionals and interns to identify common web accessibility priorities for developers
- Engineered a Chrome extension with a REST API using Flask to scan websites, compute accessibility scores, and identify WCAG compliance issues
- Built and deployed a connected web application with GitHub OAuth, scan history, accessibility progress tracking, and a community discussion board using a Next.js, Go, and MongoDB stack

Best Buy

September 2024 - December 2024

Computing Department Associate

Watertown, MA

- Assisted 30+ customers weekly in troubleshooting iOS performance, software installation, and cloud storage issues, ensuring quick resolution and improved customer satisfaction
- Guided customers in understanding computing technologies by translating technical concepts into clear, actionable terms to support informed purchasing decisions

PROJECTS

Personal Budgeting Application

November 2025 - December 2025

Django

Boston, MA

- Built a multi-page Django web application with user authentication, recurring expense and income tracking, budgeting profiles, and persistent user data
- Designed a dashboard and data visualizations using Plotly to track spending allocation, monthly totals, and net balance over time

Global Conflict Visualization Tool

August 2024 - October 2024

Vite, React, TypeScript, Python

Boston, MA

- Developed a React application to visualize over 500 global conflicts using Correlates of War and Uppsala Conflict Data Program datasets, featuring interactive timelines, filters, and clickable map regions for detailed visualizations

SKILLS

Programming Languages & Frameworks: Java, SQL, Python, C#, Go, JS/TS, HTML/CSS, React, Next.js, Swift

Tools & Technologies: Git, MongoDB, VS Code, Docker, Vercel, Figma, LaTeX, Agile Development, CI/CD
